Springer, Netherlands, 2012. Paperback. Book Condition: New. 240 x 160 mm. Language: English . Brand New Book. Advances in electronics, communications, and the fast growth of the Internet have made the use of a wide variety of computing devices an every- day occurrence. These computing devices have different interaction styles, input/output techniques, modalities, characteristics, and contexts of use. Furthermore, users expect to access their data and run the same application from any of these devices. Two of the problems we encountered in our own work [2] in building VIs for different platforms were the different layout features and screen sizes associated with each platform and device. Dan Ol- sen [13], Peter Johnson [9], and Stephen Brewster, et al. [4] all talk about problems in interaction due to the diversity of interactive platforms, devices, network services and applications. They also talk about the problems associated with the small screen size of hand-held devices. In comparison to desk- top computers, hand-held devices will always suffer from a lack of screen real estate, so new metaphors of interaction have to be devised for such devices. It is difficult to develop a multi-platform user interface (VI) without duplicating development effort. Developers now face the daunting task to build UIs that must work across multiple devices. There have been some approaches towards solving this problem of multi-platform VI development including XWeb [14]. Building plastic interfaces [5,20] is one such method in which the VIs are designed to withstand variations of context of use while preserving usability . Softcover reprint of the original 1st ed. 2002.
